from his two albums Songs of L.C. and Songs from a room. So i'm interested in the way other people play his songs on the guitar. Perhaps You are also interested and we can put our information together to work out some new tabs. Here is a his anthology songbook. Feel free to criticize the lines and tell what can be done better. Is this group the right place for such stuff or should i better stay at home? Thank You very much for reading these lines and for any answer.
